

PUC NETWORKING

AVL

PRESENTS

**Strengthening of in use vehicle
pollution enforcement through
Online network based system**

Current Scenario of PUC centers

Air pollution in Indian cities comes from different sources such as mobile sources like buses, trucks, cars or two wheelers, stationary sources or industries, etc.

According to EPA (Environmental Protection Agency), driving a car is single most polluting thing that most of us do.

At most of the places PUC centers are running isolated and due to this there is high possibility to generate the fake certificates using fake devices and software applications. So the monitoring of PUC centers by Transport Department is needed which can be achieved by implementing the PUC networking.

There is no system to identify the polluting private vehicle as the vehicles are not regularly coming to transport department for certifications.

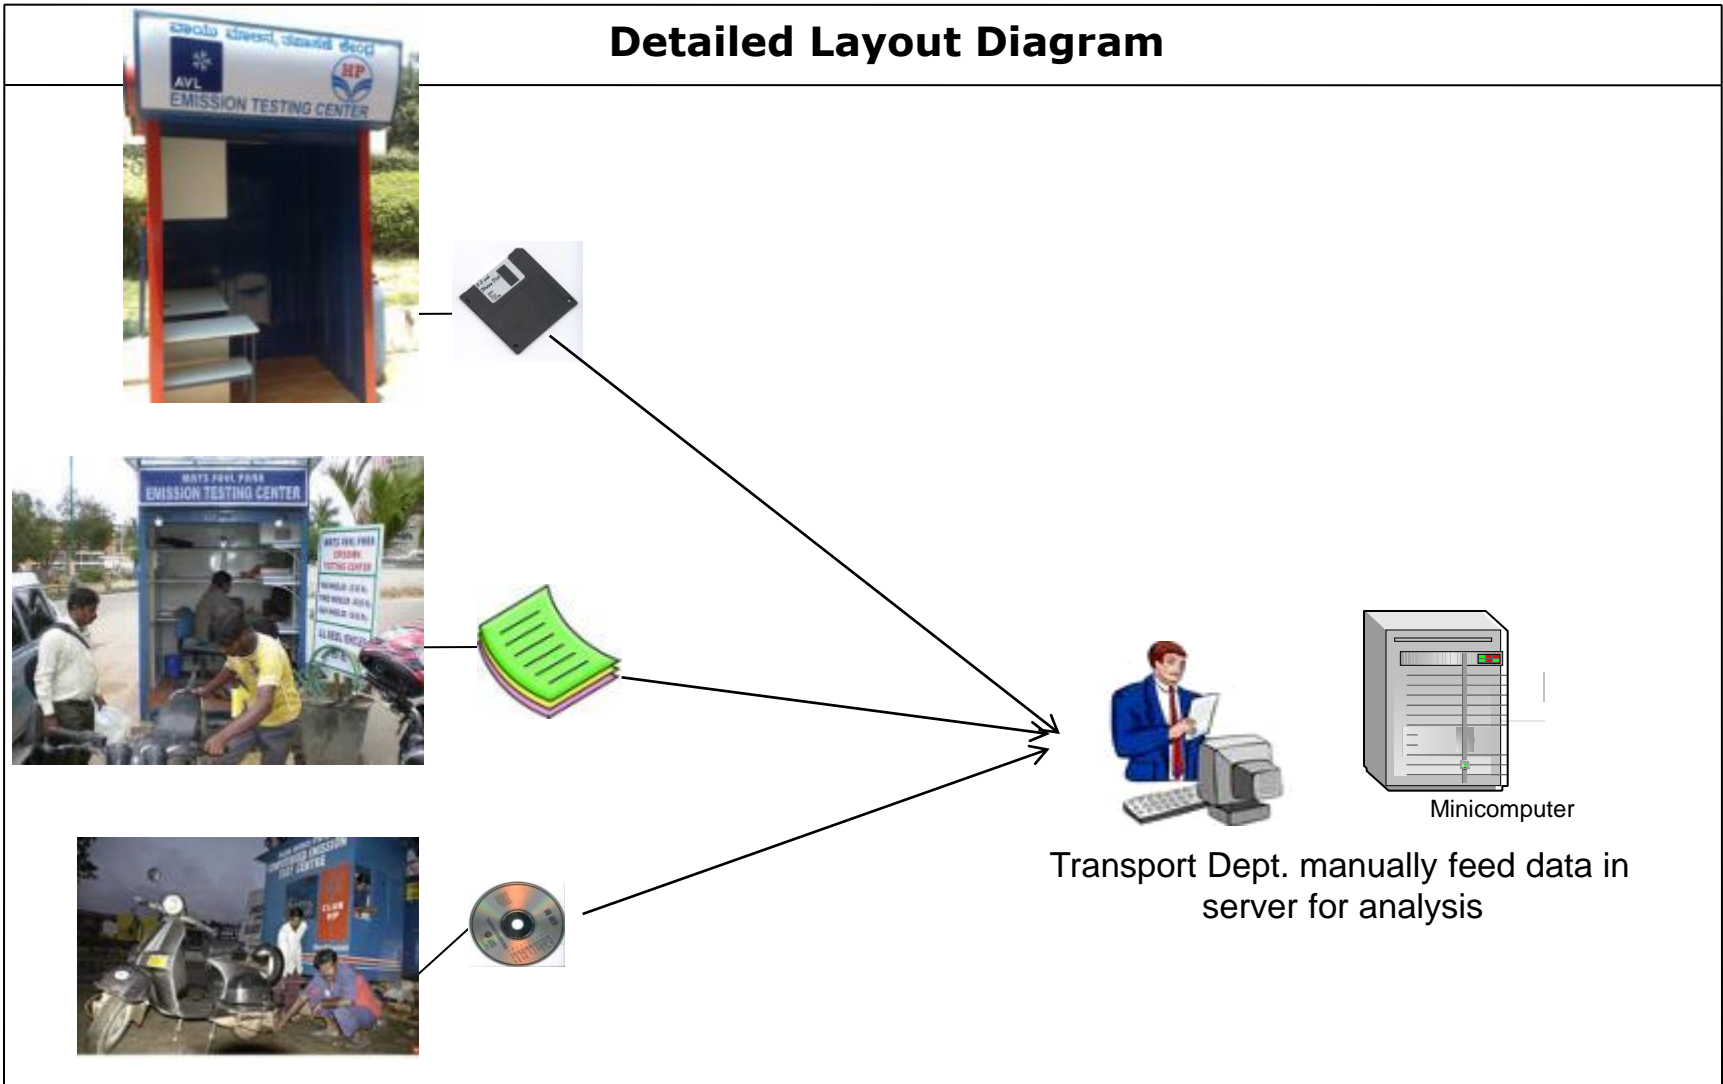

In current system, no records are available for checking the compliances of pollution certification and PUC centers are not regularly updating the transport department about the tested vehicles.

The importance of vehicle pollution monitoring is to give good health to our engines which in turn gives cleaner world to mankind.

Present System

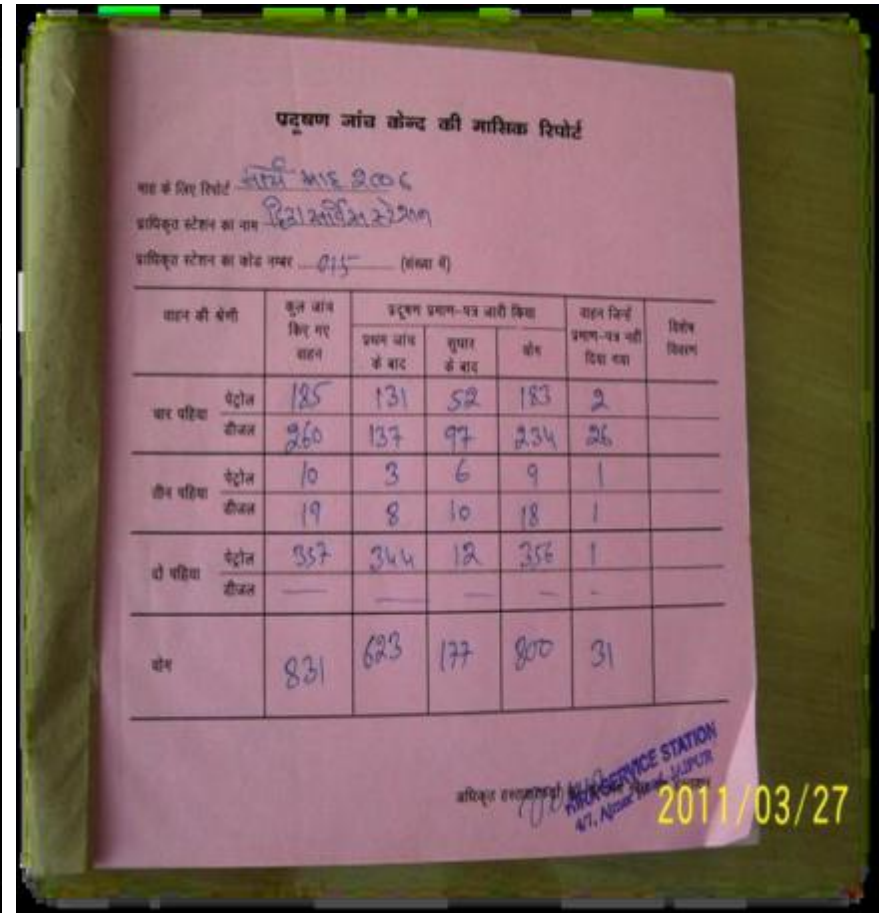

Detailed Layout Diagram

Present System

System Audit - Manual method

Next Generation: On Line system

Detailed Layout Diagram

COMPARISON

PRESENT SYSTEM

- Customer has to use device vendor software for data acquisition, certificate generation & manually send the data to transport department
- Present system is offline testing model
- Customer has to maintain database & all information at their end

NETWORKED SYSTEM

- Customer requires only internet connection to connect to the central server, customer need not use vendor software, automatically data is stored in server.
- Latest system is a real time online system model
- All information & database will be stored in central server

COMPARISON

PRESENT SYSTEM

- In the case of any change in regulation customer has to get software from device vendor
- Vehicle owner & traffic police can't check authenticity of certificate
- Online data analysis is not possible

NETWORKED SYSTEM

- All the regulation has to be updated at central server & it automatically reflects on all emission centers
- Vehicle owners & traffic police can verify the certificate by sending SMS on their mobile phone.
- Online data analysis is possible, this also helps in reminder generation & online checking of certificates

System Benefits

Next Generation: On Line system

TECHNOLOGY BREAKTHROUGH

- The new concept is breakthrough in terms of technology & simplicity of operations as it facilitates online testing
- The certificate is generated at Central server and the decision of pass fail is taken.
- The PUC centers are just terminal for interface between equipment and server and finally printing the certificate generated by server.
- The puc owner can subscribe certificates quantities monthly or annually just like cable/dish tv to run emission center.
- The status of Equipment calibration and Amc is monitored online and testing at center can be held up any time through server.

Next Generation: On Line system

Benefits- PUCG User

1. Automated online of data and analysis, no need to maintain test data at their end.
2. No requirement of device vendor software
3. Uniform system of testing and compilation.
4. The renewal of subscription is online
5. User Friendly system.
6. Time efficient system.
7. Cost Effective, Reliable and uses latest technology.

Next Generation: On Line system

Benefits- Transport department

1. Automated real time data availability from the all PUC centers.
2. PUCC center has no control, works only like a terminal.
3. Reliability of data is insured at the server end.
4. Online supervision of the transport department - Online center audit, Pass / Fail judgment and various emission parameters analysis.
5. Online Reports : Read only access to data reports can be provided to any autonomous national/ international body.
6. Automated response can be sent to the vehicle owners for reminding them of the validity of their certificates, through SMS from the Transport Department.
7. Road side verification possible by police using sms facility (in future).
8. The system will reduce drastically the malpractices / manipulation in emission test.
9. The testing fee is printed on the certificate.

NETWORKING OF EMISSION CENTERS IN DELHI and KARNATAKA AT GLANCE

- This project is executed from transport department through NPOs (a govt of karnataka enterprise) in state of Karnataka.
- Similarly this project is executed from transport department through NPO in state of Delhi.
- NGO's has entrusted AVL India Pvt Ltd to execute this project with an mou.
- This project started in Dec 2008 in State of Delhi and running successfully.
- The project started in State of karnatak in 2010 and valid for 6 years with the scope of renewal.

Glimps through Networking system

PUC Networking

OBJECTIVE:

To connect all Computerized Pollution under check centers (CPUCC) to a centralized server (physical or cloud server) in order to capture online data of all Computerized Pollution Check centers for enhanced analysis, inspections, reporting and future planning.

SYSTEM OVERVIEW:

All CPUCC will be connected to a centralized server and CPUCC will upload online test data to this server. The Transport Department can analyze the compiled data on various basis, provided reports at Website.

Networking software product is client-server architecture based. This has two main components

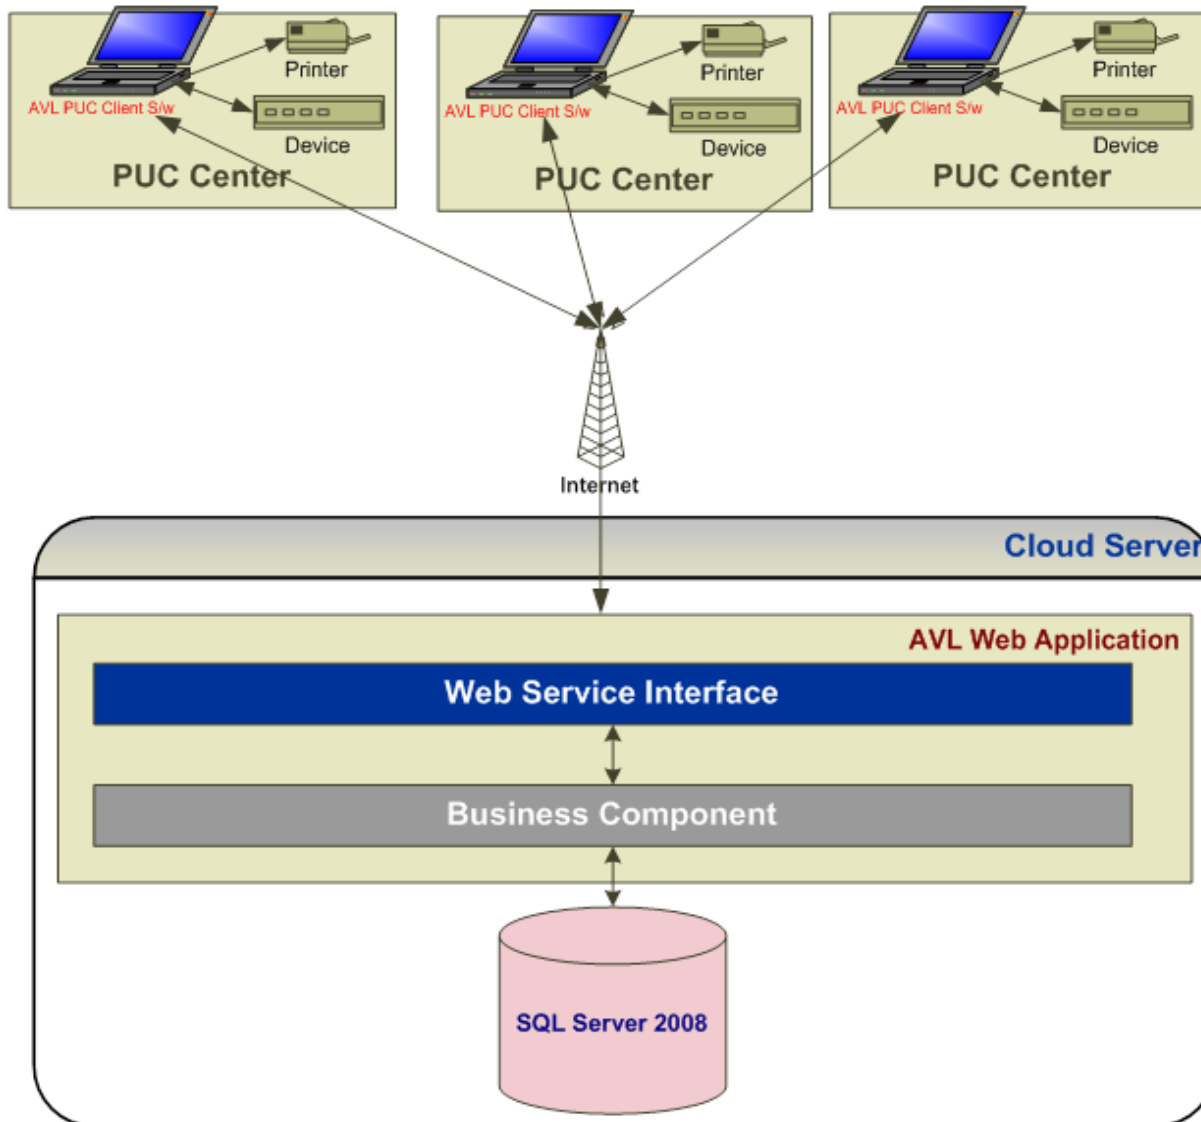

PUC client software application which runs at PUC center computer.

Web application which runs at central server.

PUC Networking

System Overview Diagram:

PUC Networking

HIGH LEVEL FEATURES OF NETWORKING SOFTWARE:

This application is fully online network supported. It is assumed that all PUC center will have high speed internet connection.

High level features details of the software application

PUC client software features

- Separate Login for each licensed PUC center: Single login will work for both Petrol and diesel emission test or Petrol/Diesel emission test whichever is applicable.
- Procedure for Petrol / Gas vehicle emission test.
- Procedure for Diesel emission test.

PUC Networking

HIGH LEVEL FEATURES OF NETWORKING SOFTWARE:

Web application (Website) features

- Different user logins based on the user roles, following is the list of user role
 - Admin
 - Reporting
 - Operator
 - Manufacturer
 - Customer Support
- Web application will have reports in which predefined report formats will be available for analysis and or record keeping , following are example reports
 - Daily vehicle test report.
 - Monthly vehicle test report.
 - Reports for passed and failed Petrol and diesel vehicles
 - Center wise reports
- Website will help device calibration status and license status.
- PUC software patches and upgrades will be available at website (if any).
- Complaints logging and tracking.

No.CT/ENF-1/PUC/2004-05

Dated:29-09-2004

CIRCULAR

Subject: Implementation of new emission standards effective from 1st October'2004.

Reference: The notification of the Ministry of Road Transport and Highways, Government of India, bearing No: GSR No. 111(E) dated 10th February'2004.

1. The Ministry of Road Transport and Highways, Government of India has issued the gazette notification bearing No. GSR No.111(E) , dated 10th February '2004 vide which Rule 115(2) of the Central Motor Vehicles Rules,1989 has been amended and the revised emission standards would come into force with effect from 1st October, 2004 as follows:-

Petrol/CNG/LPG driven vehicles ::

Sl.	Vehicle type	CO %	HC in ppm
-----	--------------	------	-----------

FAQ's

- How to check the validity of PUC certificates on roads from following two aspects,
 - Certificate is generated after proper emission test, no fake printed certificate only
 - Check the validity of PUC test on road, keeping in mind that traffic should not be affected means somehow online checking.
- How to make sure that emission test is done properly means no tampering is done with Device or no fake s/w used for this.

Query 1 .How to check the validity of PUC certificates on roads from following two aspects,
1.1 Certificate is generated after proper emission test, no fake printed certificate only

Solution: This can be achieved By using QR codes/Google Goggles/ Microsoft code being printed on the certificate .

These code will be generated at server end based on the vehicle data , emission data of the vehicle along with unique server generated codes .

These codes can be scanned using Mobile phone camera application available easily.
The control for generation of these codes will in our end so we can put our own security algorithms in the same.

Note: These Codes can be easily read by freely available Code readers like RedLaser ,QR Droid ,etc
These apps are available on net for free download

1.2 Check the validity of PUC test on road, keeping in mind that traffic should not be affected means somehow online checking.

Solution: By sending On line sms to server of the registration No / Puc certificate no to the main server which will send back an sms with all details instantaneously.

Further the PUC test data can be merged with the registration database captured by Transport Department and while issuing the E challan the Puc status can also be verified and if required challans can be issued

Query 2: How to make sure that emission test is done properly means no tampering is done with Device or no fake s/w used for this.

Solution: Since AVL is a core company of engines development and the knowledge on emission is vast hence using different algorithms for reverse checking the emission test data

Using :

1. O₂ value
2. Lambda
3. CO corrective

It can be verified weather the test is done correctly or else needs to be rejected. Online auditing is applied so it also checks for any specific test data pattern coming from each center using device details , vehicle make and model and emission parameters

Further the system has online information about the device calibration status and center's license validity .Through this the center can be made to stop functioning remotely.

Note: On site Enforcement inspection and audit by TD is the most powerful way of curbing malpractices. Enforcement teams can be supported by the reports generated through on line audit of the server data.

Thank You
